**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The meaning of the phrase 'said mesh elongates and its internal diameter decreases' is unclear as it is unclear how the tearing leads to elongation.

***Claim Rejections – 35 USC § 103(a)***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 – 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taylor et al. (U.S. Patent No. 6,227,094).

With regard to Claims 1 and 6, Taylor et al disclose a protective tube (column 1, line 20) comprising a plurality of threads that are braided (column 3, lines 27 – 35), therefore to form a mesh, comprising mesh fixing means (warp elements coupled to the yarns; column 3, lines 57 – 60) that are tearable (nylon; column 3, lines 40 – 41) and elastic.

With regard to Claim 2, the fixing means are warp elements, as stated above, therefore a plurality of threads disposed parallel, and are welded to the mesh (saturant; column 5, lines 9 - 14).

With regard to Claims 3 – 4, the threads that make up the fixing means are disposed longitudinally in regard to the tube, as shown in Figure 3; the fixing means are therefore a plurality of weld points that can be torn away from the threads.

With regard to Claim 5, the threads that make up the mesh are made from a polyester (column 3, lines 34 - 36).
